

Since 1996, the dedicated team at Micronutrient Support Services™ have been working with and training physicians, and have helped more people successfully transition from medications to micronutrient therapies than any other organization in the world.

Reducing medication can be tricky, and serious: you shouldn't do it alone. In regards to reducing psychotropic medication dosages, Dr. Ross J. Baldessarini, professor of psychiatry and neuroscience at Harvard Medical School says "...Stopping abruptly or "cold turkey" can cause a variety of distressing reactions, ranging from mild to moderate early discontinuation symptoms with antidepressants, rapid return of the illness being treated, or even potentially life-threatening seizures with a high dose of benzodiazepines."

THERE IS AN ANSWER

You can work with the support representatives at Micronutrient Support Services™ to transition safely and comfortably from psychotropic medications to micronutrients. They will partner with you and assist you to take back ownership of your own health.

All affiliates and wholesalers can access Micronutrient Support Services™.

The initial consultation is free. If you require more support than one free call you can sign up for the affordable fee of \$34.95 per month. Most individuals require the service for 1-3 months. In some cases it may be longer. We also have information for your physician to let him/her know how the process works.

ITS SIMPLE TO GET STARTED! JUST FOLLOW THESE STEPS:

1. Go to www.micronutrientsupport.com
2. Log in as a new customer. You will be asked for an email address and a password.
3. Once you log in you will answer a few questions in regards to diagnosis (if you have one), medications, etc.
4. When Micronutrient Support Services™ receives your information they will call you and set up a customized program designed just for you.
5. During your initial call you and the support representative will determine whether or not you need to sign-up for ongoing support with the fee of \$34.95.

You will be able to track your symptoms on the site and view your progress, review possible limiting factors and more.
